

Monte Rosa Therapeutics to Participate in Upcoming Investor Conferences

1.31.2024

BOSTON, Jan. 31, 2024 (GLOBE NEWSWIRE) -- Monte Rosa Therapeutics (Nasdaq: GLUE), a clinical-stage biotechnology company developing novel molecular glue degrader (MGD)-based medicines, today announced that management will participate in the following investor conferences:

- Guggenheim 6th Annual Biotechnology Conference (New York, NY) – Markus Warmuth, M.D., Chief Executive Officer, to participate in fireside chat, February 7, 2024, at 1:30 p.m. ET.
- TD Cowen 44th Annual Health Care Conference (Boston, MA) – Filip Janku, M.D., Ph.D., Chief Medical Officer, to participate in corporate panel discussion, “Breast and Lung Cancer,” March 6, 2024, at 9:10 a.m. ET.

A webcast of each presentation will be accessible via the “Events & Presentations” section of Monte Rosa’s website at ir.monterosatx.com, and an archived version will be made available for 30 days following the presentation.

About Monte Rosa

Monte Rosa Therapeutics is a clinical-stage biotechnology company developing highly selective molecular glue degrader (MGD) medicines for patients living with serious diseases in the areas of oncology, autoimmune and inflammatory diseases, and more. MGDs are small molecule protein degraders that have the potential to treat many diseases that other modalities, including other degraders, cannot. Monte Rosa’s QuEEN™ (Quantitative and Engineered Elimination of Neosubstrates) discovery engine combines AI-guided chemistry, diverse chemical libraries, structural biology and proteomics to identify degradable protein targets and rationally design MGDs with unprecedented selectivity. The QuEEN discovery engine enables access to a wide-ranging and differentiated target space of well-validated biology across multiple therapeutic areas. Monte Rosa has developed the industry’s leading pipeline of MGDs, which spans oncology, autoimmune and inflammatory disease and beyond, and has a strategic collaboration with Roche to discover and develop MGDs against targets in cancer and neurological diseases previously considered impossible to drug.
